Market Insight Quarterly

Second Quarter 2026

News & Views from LPL Research

The economic forecasts set forth in the presentation may not develop as predicted. Please note: all return figures are as of June 30, 2026, unless otherwise stated. This information is not intended as authoritative guidance or tax or legal advice. You should consult with your attorney or tax advisor for guidance on your specific situation.

About us

LPL Financial Retirement Partners is the retirement-focused division of LPL Financial LLC dedicated solely to supporting financial professionals who service the retirement plan market. Our promise is to create services and resources so that financial professionals may deliver employers and employees exceptional experiences and high-quality programs by providing services that help save time, reduce exposure to fiduciary liability, and address both Internal Revenue Service and Department of Labor requirements. Our comprehensive analysis of retirement plans and plan design features establishes a strong foundation, and our structured service and employee communication model strives to ensure ongoing excellence. LPL Financial Retirement Partners provides professional human capital gained through decades of experience working for, and with, some of the top defined contribution, defined benefit, and deferred compensation service providers in the industry. Our independent perspective has been utilized by thousands of companies nationwide, with billions in retirement plan assets. The economies derived from our scale and national presence enable us to give financial professionals outstanding resources to help plan sponsors evaluate, design, and negotiate high-quality retirement programs. For more information regarding our firm, please visit our website: www.lpl.com.

Market Insight Quarterly

Q2 2026 at a Glance

Sector	Q2 2026
Gross Domestic Product*	2.5%
S&P 500 Index	15.2%
Bloomberg U.S. Aggregate Bond Index	0.7%
Bloomberg Commodity Index	-8.1%

Source: LPL Research, Bloomberg, 06/30/2026

* Bloomberg consensus as of 06/30/2026

Figures for S&P 500 Index, Bloomberg U.S. Aggregate Bond Index, and Bloomberg Commodities Index are total returns from 03/31/2026 - 06/30/2026 (Q2)

All indexes are unmanaged and cannot be invested into directly. The returns do not reflect fees, sales charges, or expenses. The results don't reflect any particular investment.

Past performance is not indicative of future results.

S&P 500, Nasdaq Post Best Quarter since 2020 in Equity Market Rebound

After snapping a three-quarter winning streak in the first quarter, stocks bounced back over the last three months with the S&P 500 and Nasdaq Composite delivering their best quarterly returns in six years. The benchmark S&P 500 added 15.2%, including dividends, while the tech-heavy Nasdaq rallied 21.6% on a big tailwind from semiconductor and memory chip companies amid little sign of easing artificial intelligence (AI) compute demand or spending plans. The Dow Jones was a relative laggard but ended June at record levels after posting a 13.4% total return.

While AI remained the most prominent theme, attention across Wall Street continued to increase on the so-called "picks-and-shovels" side of the AI trade as demand for cooling, power production, and all things related to data center construction also benefited from the enthusiasm. As such, the broader fundamental backdrop was bolstered by blockbuster S&P 500 earnings growth, with all 11 sectors reporting positive first quarter growth. The equity benchmark's 28.6% earnings growth marked its best since late 2021, cruising past pre-quarter estimates of around 13%.

Simultaneously, macro data continued to paint a picture of economic resilience. Data indicated consumers continued to spend; jobless claims remained low, and although annualized inflation remained above the Federal Reserve's (Fed) 2% target, there were limited signs of higher energy prices bleeding into core figures. However, markets faced a notable shift away from further Fed rate cuts as the June monetary policy meeting was viewed as decidedly hawkish with new Fed Chairman Kevin Warsh stressing the importance of price stability.

Market participants also continued to closely monitor developments out of Washington and the Persian Gulf. Kinetic action between the U.S. and Iran continued until a temporary ceasefire was reached in early April, before sporadic fighting and volatile negotiations continued until a preliminary memorandum of understanding (MOU) materialized in June. Sentiment was supported by the truce, but the key point for markets regarding the conflict continued to be the de facto closure of the Strait of Hormuz as tanker traffic spent most of the quarter at a standstill. Nonetheless, some vessels trapped in the Gulf since the onset of the conflict began traversing the waterway by quarter-end, helping ease energy prices and economic jitters.

Small Caps Extend Year-to-Date Outperformance

Small cap stocks built on early-year outperformance over their large cap peers, buoyed by both momentum trades and market rotation dynamics. The Russell 2000 small cap index added 21.6% over the last three months, including dividends, besting the large cap Russell 1000 Index's 15.1% advance by 6.5 percentage points. Wall Street's smaller companies were bid amid a few moving factors, including the Russell 2000 benefiting from a momentum/higher beta rally, the late quarter rotation away from mega-caps, as well as some cyclical drivers, including a recovery in strong earnings momentum and the U.S. manufacturing recovery taking hold. Technology led gains with a 62.1% surge, while energy was the lone sector to close lower.

Growth Stocks Rally on the Back of a Chipmaker Surge

Growth stocks were back on top of their value counterparts after back-to-back quarters of relative underperformance, as the Russell 1000 Growth Index added 16.7%, while the Russell 1000 Value advanced 13.9%. While the AI theme continued to come under monetization scrutiny, the growth style was led by a historic jump in semiconductor names (the best quarter on record for the group) as the insatiable AI demand narrative gained traction throughout earnings season. At the same time, Magnificent Seven names closed mostly higher and software names bounced back from a sharp first quarter loss as white-collar job disruption concerns ebbed. Nonetheless, a broadly increased risk appetite on U.S.-Iran de-escalation and rotation dynamics lifted the value style.

Under the surface, the potential for elevated equity supply coming to market was in focus as several AI-related names announced billions of dollars in issuance while markets parsed multiple initial public offering (IPO) filings. Most notably, big tech names faced some downside pressure as a source of funds for the record SpaceX (SPCX) IPO in June — although markets received the listing well with tepid broader market implications.

Emerging Markets Surged on Chipmaker Enthusiasm

Emerging market (EM) equities continued their stretch of outperformance over the U.S. as the MSCI EM Index posted a 24.1% rally versus a strong 15.2% advance for the S&P 500. Developed international markets, however, lagged their American counterparts with an 11.1% gain for the MSCI EAFE Index.

Asia-Pacific emerging markets continued to be standouts with South Korea's KOSPI scoring its best quarterly gain since 1998 on the back of the index's chipmaker heavyweights SK Hynix and Samsung. Both companies reached the elite $1 trillion market cap club, while Taiwan also rallied on support from investor enthusiasm around electrical equipment and semiconductor companies. China was a laggard due to auto and retail sector weakness, while energy-linked companies in Latin America also underperformed. Despite lagging the U.S., European markets gained ground on de-escalation in the Middle East and positive economic momentum, while Japan was supported by financials and exporters on increased yield curve steepness, in addition to tech names.

Treasuries Rose on Easing Crude Prices and Inflation Jitters

Core bonds, proxied by the Bloomberg U.S. Aggregate Index, returned to positive territory last quarter with a 0.7% gain. U.S. Treasuries ended the quarter relatively flat with just a 0.3% gain after climbing back above the quarterly flatline in June. Bond market investors faced shifting inflation and economic jitters but ultimately were supported by easing inflation concerns as crude prices fell, partially countering rate hike bets from a hawkish Fed meeting and strong economic data. Nonetheless, shorter-term yields remained elevated as market pricing continued to expect monetary policy tightening by year end-2026.

Meanwhile, corporate credit markets outperformed the broader fixed income market as spreads tightened further with a 1.4% advance for the investment grade space and a 2.5% advance for high-yield securities, measured by the Bloomberg Corporate Bond and the Bloomberg High-Yield Indexes, respectively. Mortgage-backed securities lagged slightly with just a 0.6% gain. Across the pond, sovereign bonds in the Eurozone outperformed their U.S. peers on support from falling inflation expectations and lower oil prices, while also successfully absorbing the European Central Bank's first rate hike since 2023 .

Commodities Tumble on the Back of Falling Oil and Gold Prices

The Bloomberg Commodities Index pared back part of its first quarter surge, shedding 8.1% over the last three months. West Texas Intermediate (WTI) crude futures held their first quarter surge into early June (amid volatile trading) before dropping in response to Washington and Tehran inking a preliminary MOU. Tankers trapped in the Persian Gulf since the early days of the conflict began trickling out of the Strait of Hormuz, and although shipping volumes remain far below pre-conflict levels, resupply hopes sent WTI futures 14.9% lower on the quarter, back near $70 per barrel.

Outside of energy, gold prices tumbled just over 14%, falling below the year-to-date flatline. A few moving pieces were in play as anticipation of tighter global monetary policy acted as a headwind for non-yielding bullion, while a stronger dollar and some countries monetizing gold reserves as a source of U.S. dollars to bridge revenue gaps from disrupted oil exports also weighed on bullion prices. Silver also sold off, ending 22% lower, while copper outperformed with a 9.3% gain. Grains declined and soft commodities edged higher on geopolitically-driven fertilizer shipping disruptions.

All commodities performance is based on Bloomberg commodity indexes.

A Look Ahead

Economy. The economic landscape remains dynamic and complex, but tailwinds for growth should outweigh headwinds over the balance of 2026. Looking ahead, investors should consider the following:

- **Resilient Growth.** Economic growth should moderate but remain positive in the second half, with strong business spending on AI-related equipment, intellectual property, and non-residential structures helping offset weakness in housing and other rate sensitive sectors.
- **Rate Cuts or Hikes?** Central bankers in Washington and new Fed Chair Kevin Warsh face a challenging macro backdrop as inflation remains sticky and limits the central bank's flexibility. We believe the Fed is likely to remain on hold in the near term, removing any bias toward easing and considering tightening if warranted by economic data.
- **Low, but Rising Unemployment.** The labor market is still posting a relatively low unemployment rate, mainly because the corporate sector is in a "low-hiring, low-firing, low-quits" equilibrium — firms are hiring more cautiously, but they are also not shedding many workers, which helps keep measured unemployment from rising much. Unemployment may rise slightly, but remain historically low, as labor force participation edges higher.
- **Easing Inflation.** Our base case is that inflation pressures moderate by the end of 2026 if geopolitical tensions ease meaningfully, as the recent upside pressure has been driven disproportionately by energy and related supply-chain channels rather than by a broad-based reacceleration in underlying inflation.

Stocks. An improving macro backdrop and strong, AI-driven earnings growth will likely continue supporting the stock market through year-end, although more episodes of market volatility should not be ruled out. Looking ahead, investors should consider the following:

- **Improving Macro and AI to Power Equities.** The first half of 2026 faced some expected and unexpected dynamics. However, the massive AI buildout and resulting earnings boom has offset higher oil prices, helping deliver solid first half gains. In the second half, we expect stocks to grind higher amid an improved but still challenging macro backdrop and continued AI-driven earnings strength.
- **Earnings Still Riding the AI Wave.** First quarter earnings growth near 30% was extraordinary and an encore is likely coming in the second quarter. AI-fueled technology earnings have far exceeded expectations, but growth is concentrated in the technology sector, which puts stocks at the mercy of the technology spend as scrutiny on investments may rise. Meanwhile, capital to fund the buildout could get more expensive.

- **Stretched Positioning in AI Theme.** While broadly justified by earnings, the sharp rally in semiconductor stocks on AI enthusiasm was extreme and has created stretched positioning. As such, we think diversifying between the AI theme and rotation beneficiaries could be critical as positioning returns from statistical extremes.
- **Stock Market Risks: The Usual Suspects.** The Iran conflict, possible Fed rate hikes, and the potential for AI disappointments head up the list of risks to stocks in the second half. Also consider stocks tend to be more volatile during midterm election years. A flare-up of China-Taiwan tensions and excess equity supply via IPOs are other ongoing risks to monitor.

Bonds. The first half rapidly delivered three challenges to bond investors: a Fed leadership change, a geopolitical shock that sent oil prices and yields surging, and an artificial intelligence (AI) buildout that is having a measurable impact on the corporate bond market. Looking ahead, consider the following:

- **Treasuries to Remain Rangebound.** Sticky inflation and resilient growth keep the Fed on extended pause, leaving Treasury yields range-bound, with the 10-year likely finishing the year between 4.00% and 4.50% absent disinflation or clear economic weakening.
- **Tight Credit Spreads.** Tight credit spreads likely to persist, though AI-driven borrowing by hyperscalers may pressure spreads modestly higher; short-to-intermediate corporate bonds remain attractive for income-focused investors.
- **Return Drivers.** Returns will be income driven as Treasury yields will likely stay rangebound and credit spreads remain tight. Securitized markets and unconstrained strategies may perform well, while we prefer Treasury Inflation-Protected Securities (TIPS) over nominal Treasuries as well.

Please note: All return figures are as of June 30, 2026, unless otherwise stated.
Past performance is not indicative of future results. The economic forecasts set forth in the presentation may not develop as predicted.

U.S. Treasuries may be considered “safe haven” investments but do carry some degree of risk including interest rate, credit, and market risk. They are guaranteed by the U.S. government as to the timely payment of principal and interest and, if held to maturity, offer a fixed rate of return and fixed principal value.

Important Disclosures

Investing involves risks including possible loss of principal. No investment strategy or risk management technique can guarantee return or eliminate risk in all market environments.

The opinions voiced in this material are for general information only and are not intended to provide specific advice or recommendations for any individual security. To determine which investment(s) may be appropriate for you, consult your financial professional prior to investing. The economic forecasts set forth in this material may not develop as predicted. All performance referenced is historical and is no guarantee of future results.

All information is believed to be from reliable sources; however, LPL Financial makes no representation as to its completeness or accuracy. All company names noted herein are for educational purposes only and not an indication of trading intent or a solicitation of their products or services. LPL Financial doesn't provide research on individual equities.

Gross domestic product (GDP) is the monetary value of all the finished goods and services produced within a country's borders in a specific time period, though GDP is usually calculated on an annual basis. It includes all of private and public consumption, government outlays, investments, and exports less imports that occur within a defined territory.

Yield is the income return on an investment. This refers to the interest or dividends received from a security and are usually expressed annually as a percentage based on the investment's cost its current market value or its face value.

Earnings per share (EPS) is the portion of a company's profit allocated to each outstanding share of common stock. EPS serves as an indicator of a company's profitability. Earnings per share is generally considered to be the single most important variable in determining a share's price. It is also a major component used to calculate the price-to-earnings valuation ratio.

Small cap is a term used to classify companies with a relatively small market capitalization. The definition of small cap can vary, but it is generally a company with a market capitalization of between $300 million and $2 billion. The prices of small cap stocks are generally more volatile than large cap stocks.

The S&P 500 Index is a capitalization-weighted index of 500 stocks designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries.

The Bloomberg Global Aggregate Index measures the performance of global investment grade debt. The index includes treasury, corporate, and securitized fixed-rate bonds. Investing in stock includes numerous specific risks including: the fluctuation of dividend, loss of principal and potential illiquidity of the investment in a falling market. Bonds are subject to market and interest rate risk if sold prior to maturity. Bond values will decline as interest rates rise and bonds are subject to availability and change in price. High yield/junk bonds (grade BB or below) are not investment grade securities, and are subject to higher interest rate, credit, and liquidity risks than those graded BBB and above. They generally should be part of a diversified portfolio for sophisticated investors.

The Russell 1000 Index consists of the 1,000 largest securities in the Russell 3000 Index, which represents approximately 90% of the total market capitalization of the Russell 3000 Index. It is a large-cap, market-oriented index and is highly correlated with the S&P 500 Index. The Russell 2000 Index is an unmanaged index generally representative of the 2,000 smallest companies in the Russell 3000 index, which represents approximately 10% of the total market capitalization of the Russell 3000 Index.

The MSCI EAFE Index is a free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the US & Canada. The MSCI EAFE Index consists of the following developed country indices: Australia, Austria, Belgium, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland and the UK. The MSCI EM (Emerging Markets) Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of the emerging market countries of the Americas, Europe, the Middle East, Africa and Asia. The MSCI EM Index consists of the following emerging market country indices: Brazil, Chile, Colombia, Mexico, Peru, Czech Republic, Egypt, Greece, Hungary, Poland, Qatar, Russia, South Africa. Turkey, United Arab Emirates, China, India, Indonesia, Korea, Malaysia, Philippines, Taiwan, and Thailand.

Commodity-linked investments may be more volatile and less liquid than the underlying instruments or measures, and their value may be affected by the performance of the overall commodities baskets as well as weather, geopolitical events, and regulatory developments. The fast price swings in commodities and currencies will result in significant volatility in an investor's holdings.

CLIENT PERFORMANCE SUMMARY: USING HYPOTHETICAL ALLOCATIONS

The performance information shown represents past performance and is not a guarantee of future results. Investment returns and principal value of an investment will fluctuate so that when shares are redeemed, they may be worth more or less than their original cost. Current performance may be higher or lower than the data shown. Gross portfolio performance excludes any fee your advisor may charge for management of the portfolio. Net (Custom Fee) Performance represents performance after factoring in fees charged by your advisor. **Please reference the Statement of Additional Disclosures for additional details concerning the calculation methodology.**

Color Key: Active 1-25 26-50 51-75 76-100 Passive 0-100

The LPL 12 Point Score methodology consists of 12 equally rated factors which are reviewed using a pass-fail system. Investments are assigned a score and color based on the sum of data points that pass. 6 or less = Watch (red), 7-9 = Acceptable (light green) and 10 or more = Suitable (green).

This section summarizes the historical total returns for each investment and has unique styling based on the investment type. All investments are compared against other investments in the same peer group and you will see the percentile rank shown in parenthesis. Additionally, only actively managed investments will show the percentile rank color coded by quartile (1st - Green; 2nd - Light Green; 3rd - Yellow; 4th - Red).

Mutual funds and Exchange Traded Funds (ETFs) are sold by prospectus. Please consider the investment objectives, risks, charges and expenses carefully before investing. The prospectus, and, if available, the summary prospectus, which contains this and other information, can be obtained by calling your financial advisor. Read the prospectus and, if available, the summary prospectus carefully before you invest. *The performance information shown represents past performance and is not a guarantee of future results. Investment returns and principal value of an investment will fluctuate so that when shares are redeemed, they may be worth more or less than their original cost. The performance information shown reflects performance without adjusting for sales charges. If adjusted, the load would reduce the performance quoted. Current performance may be higher or lower than the data shown. For the most recent month-end performance and information on expenses, visit www.fi360.com/directory.* Percentile ranks calculated by Fi360, are based on the return shown compared to peer group (1 = top rank), do not account for sales charges, and are not provided for periods under a year.

MARKET PERFORMANCE OVERVIEW

Mutual funds and Exchange Traded Funds (ETFs) are sold by prospectus. Please consider the investment objectives, risks, charges and expenses carefully before investing. The prospectus, and, if available, the summary prospectus, which contains this and other information, can be obtained by calling your financial advisor. Read the prospectus and, if available, the summary prospectus carefully before you invest. The performance information shown represents past performance for the median mutual fund/ETF manager in each peer group and is not a guarantee of future results. Investment returns and principal value of an investment will fluctuate so that when shares are redeemed, they may be worth more or less than their original cost. The performance information shown reflects performance without adjusting for sales charges. If adjusted, the load would reduce the performance quoted. Current performance may be higher or lower than the data shown. For the most recent month-end performance, visit www.fi360.com/directory.

For each period, the top 3 performing peer groups will be colored in shades of green. The bottom 3 peer groups will be colored in shades of blue.

STYLE SUMMARY

This section groups each investment into a style category. The top charts show the number of investments grouped by their current Morningstar Style Box™. The bottom tables include investments within other style categories based on their current peer group. The Morningstar Style Box™ is a nine-square grid that provides a graphical representation of the investment style of mutual funds, exchange traded funds, group retirement plan annuities, variable annuity sub-accounts and separately managed accounts. US and International equities are classified according to market capitalization (the vertical axis) and growth and value factors (the horizontal axis). Fixed income funds are classified according to credit quality of the long bonds owned (the vertical axis) and interest rate sensitivity as measured by a bond's effective duration (the horizontal axis).

STANDARDIZED PERFORMANCE DISCLOSURE

Standardized Returns for the quarter-ended 06/30/2026. Returns for periods of less than one year are not annualized. Standardized returns assume reinvestment of dividends and capital gains. It depicts performance without adjusting for the effects of taxation, but are adjusted to reflect sales charges and ongoing fund expenses. If adjusted for taxation, the performance quoted would be significantly reduced. Any sales charge used in the calculation was obtained from the fund's most recent prospectus and/or shareholder report. If sales charges are waived (for example, for investors in a qualified retirement plan), the performance numbers may be higher. Please contact your financial advisor for further information on whether loads are waived on the investment options in your account.

Mutual funds and Exchange Traded Funds (ETFs) are sold by prospectus. Please consider the investment objectives, risks, charges and expenses carefully before investing. The prospectus, and, if available, the summary prospectus, which contains this and other information, can be obtained by calling your financial advisor. Read the prospectus and, if available, the summary prospectus carefully before you invest. *The performance information shown represents past performance and is not a guarantee of future results. Investment returns and principal value of an investment will fluctuate so that when shares are redeemed, they may be worth more or less than their original cost. Current performance may be higher or lower than the data shown. For the most recent month-end performance and information on expenses, visit www.fi360.com/directory.*

For ETFs, the market price used to calculate the Market Value (MKT) return is the midpoint between the highest bid and the lowest offer on the exchange on which the shares of the Fund are listed for trading, as of the time the Fund's NAV is calculated. Whatever day traded, the price of the shares may differ, higher or lower, than the NAV on that day. If you trade your shares at another time, your return may differ.

Investment and Insurance Products: NOT FDIC Insured / NO Bank Guarantee / MAY Lose Value

STATEMENT OF ADDITIONAL DISCLOSURES

INTRODUCTION

This report is for informational purposes only and does not constitute professional investment advice. Some data in this report was obtained from third parties. Although Fi360 obtains data from sources it deems to be reliable, it does not independently verify the data, and does not warrant or represent that the data is timely, complete, or accurate.

Unless denoted otherwise with a CI superscript (Investment Name [CI]), the investment data source is © 2026 Morningstar, Inc. All rights reserved. The data contained herein: (1) is proprietary to Morningstar, Inc. and/or its content providers; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar, Inc. nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. Any investment denoted with the CI subscript was supplied by another 3rd party such as the advisor, custodian, recordkeeper or other provider.

Mutual funds and Exchange Traded Funds (ETFs) are sold by prospectus. Please consider the investment objectives, risks, charges and expenses carefully before investing. The prospectus and, if available, the summary prospectus, which contains this and other information, can be obtained by calling your financial advisor. Read the prospectus and, if available, the summary prospectus carefully before you invest.

All investments involve risk. The principal value and investment return will fluctuate so that your shares, when redeemed, may be worth more or less than the original cost. All investing involves risk, including the possible loss of principal. This does not apply, however, to the guaranteed portions of group annuity contracts that constitute guaranteed benefit policies as defined in ERISA 401(b)(2)(B).

Collective investment trusts (CITs) are available for investment primarily by eligible retirement plans and entities. Participation in CITs is generally governed by the terms of a Declaration of Trust and a Participation or Adoption Agreement, which is signed by the retirement plan's fiduciary at the time the plan invests in the CITs. In addition, various other documents may contain important information about the CITs including Fund Descriptions, Statement of Characteristics or Investment Guidelines, and/or other fee or investment disclosure documents. All of these documents may contain important information about CIT fees, investment objectives, and risks and expenses of the underlying investments in the CITs and should be read carefully before investing. To obtain a copy, you will need to contact the plan sponsor or trustee of the CIT.

CITs are not insured by FDIC or any other type of deposit insurance; are not deposits or other obligations of, and are not guaranteed by any firm or their affiliates; and involve investment risks, including possible loss of principal invested. CITs are not mutual funds and are exempt from registration and regulation under the Investment Company Act of 1940 (the "1940 Act"), and their units are not registered under the Securities Act of 1933, or applicable securities laws of any state or other jurisdiction. Unit holders of the Funds are not entitled to the protections of the 1940 Act. The decision to invest in CITs should be carefully considered. The CITs unit values will fluctuate and may be worth more or less when redeemed, so unit holders may lose money. CITs are not sold by prospectus and are not available for investment by the public; Fund prices are not quoted in readily available market quotation services.

Fi360 is under common ownership with Matrix Trust Company, who is the discretionary trustee of certain CITs that may be noted in this report.

Separate Accounts are available through a group annuity contract. The contract and other fee/disclosure documents, such as fact sheets, may contain important information about the separate account fees, investment objectives and risks and expenses of underlying investments in the separate accounts and should be read carefully before investing. Certain investment options may not be available in all states or U.S. commonwealths. Some payments or transfers from the Separate Accounts may be deferred as described in the group annuity contracts providing access to the Separate Accounts or as required by applicable law. Such deferment will be based on factors that may include situations such as: unstable or disorderly financial markets or investment conditions which do not allow for orderly investment transactions.

STATEMENT OF ADDITIONAL DISCLOSURES

This Statement of Additional Disclosures includes important information regarding the information provided in the report. If an investor does not understand any term or data presented herein, he/she should consult with his/her financial advisor.

PERFORMANCE

Total Return (No Load). Expressed in percentage terms, an investment's total return is determined each month by taking the change in monthly net asset value, reinvesting all income and capital gains distributions during that month, and dividing by the starting NAV. Reinvestments are made using the actual reinvestment NAV, and daily payoffs are reinvested monthly. Total Return (No Load) is not adjusted for sales charges (such as front-end loads, deferred loads and redemption fees), but do reflect management, administrative, 12b-1 fees and other costs taken out of fund assets. Total returns for periods longer than one year are expressed in terms of compounded average annual returns (also known as geometric total returns).

Total Return (With Load). Expressed in percentage terms, an investment's total return is determined each month by taking the change in monthly net asset value, reinvesting all income and capital gains distributions during that month, and dividing by the starting NAV. Reinvestments are made using the actual reinvestment NAV, and daily payoffs are reinvested monthly. Total Return (With Load) is adjusted for front-end loads, deferred loads and redemption fees, but not taxes. For funds with front-end loads, the full amount of the load is deducted. For deferred loads and redemption fees, the percentage charged often declines the longer the shares are held. Total returns for periods longer than one year are expressed in terms of compounded average annual returns (also known as geometric total returns).

Percentile Rank. The relative ranking of an investment within its peer group on a scale of 1-100 (1 being the best) for the data point and time period being measured. Rankings are calculated against the corresponding Peer Group and Number of Peers as explained in the following paragraph. Performance ranks do not account for an investment's sales charge (if applicable). Ranks will not be provided for periods less than one year.

Number of Peers. The number of investments in the same peer group which were used to calculate any percentile rank or Fi360 Fiduciary Score. Only investments which had the given data point being ranked are included in this number, so the number of peers can change for the same investment by data point being ranked. For Mutual funds (MF) and Exchange Traded Funds (ETF), we combine both sets of investments together to form one peer group for ranking purposes. For Collective Investment Trusts (CIT), since many do not report timely, we utilize the pre-defined MF/ETF peer group and calculate the ranks as an overlay on that peer group. There is no existing MF/ETF peer group for Stable Value, Leveraged Net Long and Money Market Non-40 Act. We use the following MF/ETF peer group as a proxy instead (Stable Value uses Short-Term Bond, Leveraged Net Long uses Large Blend and Money Market Non-40 Act uses Money Market Taxable) so we can calculate the ranks. For Group Retirement Plan Annuities (GRPA), we combine this universe with all mutual funds and ETFs to form one peer group for ranking purposes. For Separately managed accounts (SMA) and Variable annuity sub accounts (VA), we use their respective universe of investments only.

Benchmarks. A benchmark gives an investor a point of reference for evaluating a fund's performance by comparing benchmark returns to the fund's returns. This report may utilize one or many of these benchmarks:

Broad Index. The index used in the calculation of metrics such as Alpha, Beta, and R-Squared. The Broad Index provides a common comparison point for funds with similar investing styles across different peer groups.

Peer Group Index. The index assigned to the fund's peer group, which is a group of funds with similar investment style. Each peer group has its own index which can be used as a common comparison point between funds.

Best-fit Index. The market index that shows the highest correlation with a fund over the most-recent 36 months, as measured by the highest R-Squared. In addition, the Best-fit Index can be used to compare the betas and alphas of similar funds that show the same Best-fit Index. The Best-fit Index may not be the fund's benchmark, nor does it necessarily contain the types of securities that may be

Broadridge

STATEMENT OF ADDITIONAL DISCLOSURES

held by the fund.

Indices are unmanaged and cannot be invested in directly. Please reference the Index Descriptions section for more specific detail on each index that is included in this report.

VOLATILITY METRICS

Standard Deviation. A statistical measure of the historical volatility. It depicts how widely the returns varied over a certain period of time. Investors use standard deviation to try to predict the range of returns that are most likely for a given time period. When an investment has a high standard deviation, the predicted range of performance is wide, implying greater volatility. If the investment is the only holding in an investor's portfolio, then it is an appropriate measure of risk. If the returns follow a normal distribution, then approximately 68 percent of the time they will fall within one standard deviation of the mean return for the investment and 95 percent of the time within two standard deviations.

EXPENSES

Prospectus Net Expense Ratio. This value is from the investment's most recent prospectus. The percentage of investment assets used to pay for operating expenses and management fees, including 12b-1 fees, administrative fees, and all other asset-based costs incurred by the fund, except brokerage costs. Fund expenses are reflected in the fund's Net Asset Value. Sales charges are not included in the expense ratio. The expense ratio for fund of funds is the aggregate expense ratio defined as the sum of the wrap or sponsor fees plus the estimated weighted average of the underlying fund fees. A higher expense ratio will "drag" on the overall performance of a fund compared to peers with a lower expense ratio.

Net Expense Ratio (Rank). The percentile rank for the Net Expense Ratio within the investment's peer group. 1 being the best and 100 the worst.

Prospectus Gross Expense Ratio. This value is from the investment's most recent prospectus. The total gross expenses (net expenses with waiver added back in) divided by the fund's average net assets. If it is not equal to the net expense ratio, the gross expense ratio portrays the fund's expenses had the manager not waived a portion, or all, of its fees. Thus, to some degree, it is an indication of fee contracts. Some fee waivers have an expiration date; other waivers are in place indefinitely.

12b-1 Fee. This value is usually taken from the fund's prospectus but may have been edited by your financial advisor if the prospectus amount was not accurate for your given situation. This value is part of the Net Expense Ratio. It represents a maximum annual charge deducted from investment assets to pay for distribution and marketing costs. This value can be rebated back to the client to offset other expenses.

Front Load. A one-time deduction from a purchase made into the fund. The amount is relative to the amount of the investment, so that larger investments incur smaller rates of charge. The sales charge serves as a commission for the broker who sold the fund. Potential fees and sales charges are an important factor to consider before making an investment. The load compensates the broker or financial planner for the service of providing professional investment advice.

Deferred Load. A one-time charge paid at the time of the sale of the fund. The amount is relative to the amount of the investment, so that larger investments incur smaller rates of charge. The sales charge serves as a commission for the broker who sold the fund. Potential fees and sales charges are an important factor to consider before making an investment. The load compensates the broker or financial planner for the service of providing professional investment advice.

Weighted Average Expense Ratio. Fi360 calculates this value by taking the Total Investment Option Costs and dividing by the Total Client Assets. It represents the average expenses paid through the investment options.

STATEMENT OF ADDITIONAL DISCLOSURES

INVESTMENT STRATEGY & STYLE

Peer Group. Fi360 utilizes the Morningstar Category for peer group assignment. In an effort to distinguish funds by what they own, as well as by their prospectus objectives and styles, Morningstar developed the Morningstar Categories. While the prospectus objective identifies a fund's investment goals based on the wording in the fund prospectus, the Morningstar Category identifies funds based on their actual investment styles as measured by their underlying portfolio holdings (portfolio and other statistics over the past three years). Peer groups are for comparison only, and do not represent any investable products. Please reference the Peer Group Descriptions section for more specific detail on each peer group that is included in this report.

Morningstar Equity Style Box™. Morningstar classifies funds as being large-cap, mid-cap, or small-cap based on the market capitalization of long stocks owned; and as value, blend, or growth based on the value-growth orientation of the stock holdings. The nine possible combinations of these characteristics correspond to the nine squares of the Morningstar Style Box-size is displayed along the vertical axis and style is displayed along the horizontal axis. The referenced data elements below are a weighted average of the long equity holdings in the portfolio.

Price/Earnings Ratio is a weighted average of the price/earnings ratios of the stocks in the underlying fund's portfolio. The P/E ratio of a stock is calculated by dividing the current price of the stock by its trailing 12-months' earnings per share. In computing the average, portfolio holding is weighted by the percentage of equity assets it represents.

Price/Cash Flow Ratio is a weighted average of the price/cash-flow ratios of the stocks in a fund's portfolio. Price/cash-flow shows the ability of a business to generate cash and acts as a gauge of liquidity and solvency.

Price/Book Ratio is a weighted average of the price/book ratios of all the stocks in the underlying fund's portfolio. The P/B ratio of a company is calculated by dividing the market price of its stock by the company's per-share book value. Stocks with negative book values are excluded from this calculation.

Geometric Average Market Capitalization of a fund's equity portfolio offers a measure of the size of the companies in which the mutual fund invests.

Morningstar Fixed Income Style Box™. Morningstar classifies bond funds in its style box based on their interest rate sensitivity as limited (Ltd), moderate (Mod) and extensive (Ext) measured by the average effective duration of the fund's holdings; and their credit quality (Qual) as high (High), medium (Med), or low (Low) based on letter (or alphanumeric) credit ratings of the long bonds owned by third party credit rating agencies. The nine possible combinations of these characteristics correspond to the nine squares of the Morningstar Style Box -- quality is displayed along the vertical axis and sensitivity to interest rate along the horizontal axis.

Morningstar seeks credit rating information from fund companies on a periodic basis (e.g., quarterly). In compiling credit rating information Morningstar accepts credit ratings reported by fund companies that have been issued by all Nationally Recognized Statistical Rating Organizations (NRSROs). For a list of all NRSROs, please visit http://www.sec.gov/divisions/marketreg/ratingagency.htm. Additionally, Morningstar accepts foreign credit ratings from widely recognized or registered rating agencies. If two rating organizations/agencies have rated a security, fund companies are to report the lower rating; if three or more organizations/agencies have rated a security, fund companies are to report the median rating, and in cases where there are more than two organization/agency ratings and a median rating does not exist, fund companies are to use the lower of the two middle ratings. PLEASE NOTE: Morningstar, Inc. is not itself an NRSRO nor does it issue a credit rating on the fund. An NRSRO or rating agency ratings can change from time-to-time.

For credit quality, Morningstar combines the credit rating information provided by the fund companies with an average default rate calculation to come up with a weighted-average credit quality. The weighted-average credit quality is currently a letter that roughly corresponds to the scale used by a leading NRSRO. Bond funds are assigned a style box placement of "low", "medium", or "high" based on their average credit quality. Funds with a low credit quality are those whose weighted-average credit quality is determined to be less than "BBB-"; medium are those less than "AA-", but greater or equal to "BBB-"; and high are those with a weighted-average credit quality of "AA-" or higher. When classifying a bond portfolio, Morningstar first maps the NRSRO credit ratings of the underlying holdings to

Please see important disclosures in the Statement of Additional Disclosures. © 2026, Broadridge Financial Solutions, Inc. All rights reserved. The analysis and opinions generated by Broadridge and its affiliates do not constitute professional investment advice and are provided solely for informational purposes.

Broadridge

STATEMENT OF ADDITIONAL DISCLOSURES

their respective default rates (as determined by Morningstar's analysis of actual historical default rates). Morningstar then averages these default rates to determine the average default rate for the entire bond fund. Finally, Morningstar maps this average default rate to its corresponding credit rating along a convex curve.

For interest-rate sensitivity, Morningstar obtains from fund companies the average effective duration. Generally, Morningstar classifies a fixed-income fund's interest-rate sensitivity based on the effective duration of the Morningstar Core Bond Index (MCBI). The classification of Limited will be assigned to those funds whose average effective duration is between 25% to 75% of MCBI's average effective duration; funds whose average effective duration is between 75% to 125% of the MCBI will be classified as Moderate; and those that are at 125% or greater of the average effective duration of the MCBI will be classified as Extensive.

For municipal bond funds, Morningstar also obtains from fund companies the average effective duration. In these cases, static breakpoints are utilized. These breakpoints are as follows: (i) Limited: 4.5 years or less; (ii) Moderate: more than 4.5 years but less than 7 years; and (iii) Extensive: more than 7 years. In addition, for non-US taxable and non-US domiciled fixed income funds static duration breakpoints are used: (i) Limited: less than or equal to 3.5 years; (ii) Moderate: greater than 3.5 and less than equal to 6 years; (iii) Extensive: greater than 6 years.

The referenced data elements below are a weighted average of the long fixed income holdings in the portfolio.

Average Effective Duration is a weighted average of the duration of the underlying fixed income securities within the portfolio.

Average Effective Maturity is a weighted average of all the maturities of the bonds in a portfolio, computed by weighting each maturity date by the market value of the security.

Average Weighted Price is generated from the fund's portfolio by weighting the price of each bond by its relative size in the portfolio. This number reveals if the fund favors bonds selling at prices above or below face value (premium or discount securities, respectively). A higher number indicates a bias toward premiums. This statistic is expressed as a percentage of par (face) value.

Credit Quality Breakdowns are shown for corporate-bond holdings and depict the quality of bonds in the underlying portfolio. The report shows the percentage of fixed-income securities that fall within each credit quality rating as assigned by an NRSRO. Bonds not rated by an NRSRO are included in the not rated (NR) category.

Turnover Ratio is a decent proxy for how frequently a manager trades his or her portfolio. The inverse of a fund's turnover ratio is the average holding period for a security in the fund. As turnover increases, a fund's brokerage costs typically rise as well.

WEIGHTINGS & HOLDINGS

IPS Alignment. If a current holding does not fit within the ranges specified in the Investment Policy Statement, an alignment notice is generated. A notice can occur due to temporary style drift in an investment, a difference in categorization methodology or a gap in allocation.

CLIENT PERFORMANCE

Client performance. Performance is calculated using the current investments and allocations (as they exist today). The portfolio value will change each year and then rebalance back to that original allocation on an annual basis. Performance represents historical performance of the current investments in the portfolio.

The monthly investment returns used in the calculations are Total Returns (with no loads included) so they are not adjusted for sales charges (such as front-end loads, deferred loads and redemption fees), but do reflect management, administrative, 12b-1 fees and other costs taken out of fund assets.

If an investment does not have a return for a given month, the weighted return for only that month is calculated excluding the investment's allocation. These are identified within the tables.

Please see important disclosures in the Statement of Additional Disclosures. © 2026, Broadridge Financial Solutions, Inc. All rights reserved. The analysis and opinions generated by Broadridge and its affiliates do not constitute professional investment advice and are provided solely for informational purposes.

Broadridge

STATEMENT OF ADDITIONAL DISCLOSURES

The individual investment monthly returns are compounded to result in the corresponding portfolio return and risk metrics shown in this report.

Blended Benchmark performance is calculated as follows:

If a custom benchmark is assigned, the returns are reflective of the specified indices included in the benchmark.

A weighted return is calculated for each month based on the index allocations utilized for that month.

The same rebalancing schedule used in the portfolio is applied to the custom benchmark.

If an index does not have a return for a particular month, it will be excluded from the calculations.

The individual monthly returns are then compounded to result in the corresponding annualized returns shown in the report.

Peer Group Benchmark performance is calculated as follows:

Returns are reflective of the median manager's performance for each peer group utilized in the portfolio.

A weighted return is calculated for each month based upon the investments and allocations utilized for that month.

The same rebalancing schedule used in the portfolio is applied to the peer group benchmark.

If a peer group does not have a median return for a particular month, the assigned index return will be used instead.

The individual monthly returns are then compounded to result in the corresponding annualized returns shown in the report.

The performance of the peer group benchmark and blended benchmark (if included) are not an exact representation of any particular investment, as you cannot invest directly in an index or the peer group median manager that are used in the calculations.

Client Growth of 10k Chart. The Growth of 10k chart shows a client's performance based on how $10,000 invested in the portfolio would have grown over time with dividends reinvested. The returns used in the graph are not load-adjusted. Located alongside the portfolio graph line are lines that represent the growth of $10,000 in the Peer Group Benchmark, and if selected, the Blended Benchmark. The Peer Group Benchmark and the Blended Benchmark are detailed below the performance tables. All lines are plotted on a logarithmic scale, so that identical percentage changes in values have the same vertical distance on the graph. This provides a more accurate representation of performance than would a simple arithmetic graph.

Client Benchmarks. A benchmark gives an investor a point of reference for evaluating a portfolio's performance by comparing benchmark returns to the portfolio's returns. This report may use the following types of benchmarks:

Blended Benchmark. This custom benchmark is specified by the financial advisor or other third party who constructed the portfolio. It usually contains a blended set of indices which best represent the underlying risks and objectives of a given portfolio. Fi360 calculates a weighted monthly return based on these underlying indices.

Peer Group Benchmark. Fi360 will automatically take each investment in the portfolio and map it to their corresponding peer group for each historical period used in the calculations. We then use the median manager return for that peer group and calculate a weighted monthly return based on these median manager returns. This provides a benchmark as if you were invested in the median manager

This following indices are part of this family:

- **Morningstar Lifetime Mod 2010 TR USD.** The index measures the performance of a portfolio of global equities, bonds and traditional inflation hedges such as commodities and TIPS. This portfolio is held in proportions appropriate for a US investor who is near retirement. The Moderate risk profile is for investors who are comfortable with average exposure to equity market volatility.
- **Morningstar Lifetime Mod 2015 TR USD.** The index measures the performance of a portfolio of global equities, bonds and traditional inflation hedges such as commodities and TIPS. This portfolio is held in proportions appropriate for a US investor who is about five years away from retirement. The Moderate risk profile is for investors who are comfortable with average exposure to equity market volatility.
- **Morningstar Lifetime Mod 2020 TR USD.** The index measures the performance of a portfolio of global equities, bonds and traditional inflation hedges such as commodities and TIPS. This portfolio is held in proportions appropriate for a US investor who is about ten years away from retirement. The Moderate risk profile is for investors who are comfortable with average exposure to equity market volatility.
- **Morningstar Lifetime Mod 2025 TR USD.** The index measures the performance of a portfolio of global equities, bonds and traditional inflation hedges such as commodities and TIPS. This portfolio is held in proportions appropriate for a US investor who is about 15 years away from retirement. The Moderate risk profile is for investors who are comfortable with average exposure to equity market volatility.
- **Morningstar Lifetime Mod 2030 TR USD.** The index measures the performance of a portfolio of global equities, bonds and traditional inflation hedges such as commodities and TIPS. This portfolio is held in proportions appropriate for a US investor who is about 20 years away from retirement. The Moderate risk profile is for investors who are comfortable with average exposure to equity market volatility.
- **Morningstar Lifetime Mod 2035 TR USD.** The index measures the performance of a portfolio of global equities, bonds and traditional inflation hedges such as commodities and TIPS. This portfolio is held in proportions appropriate for a US investor who is about 25 years away from retirement. The Moderate risk profile is for investors who are comfortable with average exposure to equity market volatility.

STATEMENT OF ADDITIONAL DISCLOSURES: INDEX DESCRIPTIONS

- **Morningstar Lifetime Mod 2040 TR USD.** The index measures the performance of a portfolio of global equities, bonds and traditional inflation hedges such as commodities and TIPS. This portfolio is held in proportions appropriate for a US investor who is about 30 years away from retirement. The Moderate risk profile is for investors who are comfortable with average exposure to equity market volatility.
- **Morningstar Lifetime Mod 2045 TR USD.** The index measures the performance of a portfolio of global equities, bonds and traditional inflation hedges such as commodities and TIPS. This portfolio is held in proportions appropriate for a US investor who is about 35 years away from retirement. The Moderate risk profile is for investors who are comfortable with average exposure to equity market volatility.
- **Morningstar Lifetime Mod 2050 TR USD.** The index measures the performance of a portfolio of global equities, bonds and traditional inflation hedges such as commodities and TIPS. This portfolio is held in proportions appropriate for a US investor who is about 40 years away from retirement. The Moderate risk profile is for investors who are comfortable with average exposure to equity market volatility.
- **Morningstar Lifetime Mod 2055 TR USD.** The index measures the performance of a portfolio of global equities, bonds and traditional inflation hedges such as commodities and TIPS. This portfolio is held in proportions appropriate for a US investor who is about 45 years away from retirement. The Moderate risk profile is for investors who are comfortable with average exposure to equity market volatility.
- **Morningstar Lifetime Mod 2060 TR USD.** The index measures the performance of a portfolio of global equities, bonds and traditional inflation hedges such as commodities and TIPS. This portfolio is held in proportions appropriate for a US investor who is about 45 years away from retirement. The Moderate risk profile is for investors who are comfortable with average exposure to equity market volatility.
- **Morningstar US Mid TR USD.** The index measures the performance of US mid-cap stocks. These stocks fall between the 70th and 90th percentile in market capitalization of the investable universe. In aggregate, the Mid-Cap Index represents 20 percent of the investable universe.
- **Morningstar US Real Est TR USD.** The index measures the performance of mortgage companies, property management companies and REITs.

This following indices are part of this family:

- **MSCI ACWI Ex USA Growth NR USD.** The index measures the performance of the growth large and mid cap segments of the particular regions, excluding USA equity securities, including developed and emerging market. It is free float-adjusted market-capitalization weighted.
- **MSCI ACWI Ex USA Value NR USD.** The index measures the performance of the value large and mid cap segments of the particular regions, excluding USA equity securities, including developed and emerging market. It is free float-adjusted market-capitalization weighted.
- **MSCI ACWI NR USD.** The index measures the performance of the large and mid cap segments of all country markets. It is free float-adjusted market-capitalization weighted.

STATEMENT OF ADDITIONAL DISCLOSURES: INDEX DESCRIPTIONS

- **MSCI EM NR USD.** The index measures the performance of the large and mid cap segments of emerging market equity securities. It is free float-adjusted market-capitalization weighted.

US Treasury.

This following indices are part of this family:

- **USTREAS T-Bill Cnst Mat Rate 3 Yr.** Treasury Yield Curve Rates, commonly referred to as "Constant Maturity Treasury" rates, or CMTs, are interpolated by the U.S. Treasury from the daily yield curve. This curve, which relates the yield on a security to its time to maturity is based on the closing market bid yields on actively traded Treasury securities in the over-the-counter market. These market yields are calculated from composites of quotations obtained by the Federal Reserve Bank of New York. The yield values are read from the yield curve at a fixed maturity of 3 years.

Broadridge

STATEMENT OF ADDITIONAL DISCLOSURES: PEER GROUP DESCRIPTIONS

- **Diversified Emerging Mkts (EM).** Diversified emerging-markets portfolios tend to divide their assets among 20 or more nations, although they tend to focus on the emerging markets of Asia and Latin America rather than on those of the Middle East, Africa, or Europe. These portfolios invest predominantly in emerging market equities, but some funds also invest in both equities and fixed income investments from emerging markets.

- **Foreign Large Growth (FG).** Foreign large-growth portfolios focus on high-priced growth stocks, mainly outside of the United States. Most of these portfolios divide their assets among a dozen or more developed markets, including Japan, Britain, France, and Germany. These portfolios primarily invest in stocks that have market caps in the top 70% of each economically integrated market (such as Europe or Asia ex-Japan). Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields). These portfolios typically will have less than 20% of assets invested in U.S. stocks.

- **Foreign Large Value (FV).** Foreign large-value portfolios invest mainly in big international stocks that are less expensive or growing more slowly than other large-cap stocks. Most of these portfolios divide their assets among a dozen or more developed markets, including Japan, Britain, France, and Germany. These portfolios primarily invest in stocks that have market caps in the top 70% of each economically integrated market (such as Europe or Asia ex-Japan). Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow). These portfolios typically will have less than 20% of assets invested in U.S. stocks.

- **Global Large-Stock Blend (WB).** Global large-stock blend portfolios invest in a variety of international stocks and typically skew toward large caps that are fairly representative of the global stock market in size, growth rates, and price. Global large-stock blend portfolios have few geographical limitations. It is common for these portfolios to invest the majority of their assets in developed markets, with the remainder divided among the globe's emerging markets. Global equity portfolios are generally expected to have between 20% and 75% of their equity investments in US securities.

- **Global Small/Mid Stock (SW).** Global small/mid-stock portfolios invest in a variety of international stocks that are smaller. Global-stock portfolios have few geographical limitations. It is common for these portfolios to invest the majority of their assets in developed markets, with the remainder divided among the globe's smaller markets. Global equity portfolios are generally expected to have between 20% and 75% of their equity investments in US securities.

- **Intermediate Core Bond (CI).** Intermediate-term core bond portfolios invest primarily in investment-grade U.S. fixed-income issues including government, corporate, and securitized debt, and hold less than 5% in below-investment-grade exposures. Their durations (a measure of interest-rate sensitivity) typically range between 75% and 125% of the three-year average of the effective duration of the Morningstar Core Bond Index.

- **Intermediate Core-Plus Bond (PI).** Intermediate-term core-plus bond portfolios invest primarily in investment-grade U.S. fixed-income issues including government, corporate, and securitized debt, but generally have greater flexibility than core offerings to hold non-core sectors such as corporate high yield, bank loan, emerging-markets debt, and non-U.S. currency exposures. Their durations (a measure of interest-rate sensitivity) typically range between 75% and 125% of the three-year average of the effective duration of the Morningstar Core Bond Index.

- **Large Blend (LB).** Large-blend portfolios are fairly representative of the overall US stock market in size, growth rates and price. Stocks in the top 70% of the capitalization of the US equity market are defined as large cap. The blend style is assigned to portfolios where neither growth nor value characteristics predominate. These portfolios tend to invest across the spectrum of US industries, and owing to their broad exposure, the portfolios' returns are often similar to those of the S&P 500 Index.

- **Large Growth (LG).** Large-growth portfolios invest primarily in big U.S. companies that are projected to grow faster than other large-cap stocks. Stocks in the top 70% of the capitalization of the U.S. equity market are defined as large cap. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields). Most of these portfolios focus on companies in rapidly expanding industries.

Broadridge

STATEMENT OF ADDITIONAL DISCLOSURES: PEER GROUP DESCRIPTIONS

- **Large Value (LV).** Large-value portfolios invest primarily in big U.S. companies that are less expensive or growing more slowly than other large-cap stocks. Stocks in the top 70% of the capitalization of the U.S. equity market are defined as large cap. Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).
- **Mid-Cap Blend (MB).** The typical mid-cap blend portfolio invests in U.S. stocks of various sizes and styles, giving it a middle-of the-road profile. Most shy away from high-priced growth stocks but aren't so price-conscious that they land in value territory. Stocks in the middle 20% of the capitalization of the U.S. equity market are defined as mid-cap. The blend style is assigned to portfolios where neither growth nor value characteristics predominate.
- **Money Market - Non-40 Act (N4).** These portfolios invest in short-term money market securities in order to provide a level of current income that is consistent with the preservation of capital. These funds are not subject to 2a-7 regulations under the Investment Company Act of 1940. This category is used only in Morningstar's custom fund, separate account, and collective investment trust databases.
- **Real Estate (SR).** Real estate portfolios invest primarily in real estate investment trusts of various types. REITs are companies that develop and manage real estate properties. There are several different types of REITs, including apartment, factory-outlet, health-care, hotel, industrial, mortgage, office, and shopping center REITs. Some portfolios in this category also invest in real estate operating companies.
- **Small Growth (SG).** Small-growth portfolios focus on faster-growing companies whose shares are at the lower end of the market-capitalization range. These portfolios tend to favor companies in up-and-coming industries or young firms in their early growth stages. Because these businesses are fastgrowing and often richly valued, their stocks tend to be volatile. Stocks in the bottom 10% of the capitalization of the U.S. equity market are defined as small cap. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields).
- **Small Value (SV).** Small-value portfolios invest in small U.S. companies with valuations and growth rates below other small-cap peers. Stocks in the bottom 10% of the capitalization of the U.S. equity market are defined as small cap. Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).
- **Stable Value (VL).** Stable-value portfolios seek to provide income while preventing price fluctuations. The most common stable-value portfolios invest in a diversified portfolio of bonds and enter into wrapper agreements with financial companies to guarantee against fluctuations in their share prices. These wrapper agreements typically provide price stability on a day-to-day basis, thereby insulating each portfolio's net asset value from interest-rate volatility. Therefore, the duration for each of these funds is essentially zero. This category is only used in Morningstar's custom fund, separate account, and collective investment trust databases.
- **Target-Date 2000-2010 (TA).** Target-date portfolios provide diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2000-2010) for retirement. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Management adjusts the allocation among asset classes to moreconservative mixes as the target date approaches, following a preset glide path. A target-date portfolio is part of a series of funds offering multiple retirement dates to investors.
- **Target-Date 2015 (TD).** Target-date portfolios provide diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2011-2015) for retirement. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Management adjusts the allocation among asset classes to moreconservative mixes as the target date approaches, following a preset glide path. A target-date portfolio is part of a series of funds offering multiple retirement dates to investors.
- **Target-Date 2020 (TE).** Target-date portfolios provide diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2016-2020) for retirement. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Management adjusts the allocation among asset classes to

moreconservative mixes as the target date approaches, following a preset glide path. A target-date portfolio is part of a series of funds offering multiple retirement dates to investors.

- **Target-Date 2025 (TG).** Target-date portfolios provide diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2021-2025) for retirement. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Management adjusts the allocation among asset classes to moreconservative mixes as the target date approaches, following a preset glide path. A target-date portfolio is part of a series of funds offering multiple retirement dates to investors.
- **Target-Date 2030 (TH).** Target-date portfolios provide diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2026-2030) for retirement. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Management adjusts the allocation among asset classes to moreconservative mixes as the target date approaches, following a preset glide path. A target-date portfolio is part of a series of funds offering multiple retirement dates to investors.
- **Target-Date 2035 (TI).** Target-date portfolios provide diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2031-2035) for retirement. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Management adjusts the allocation among asset classes to moreconservative mixes as the target date approaches, following a preset glide path. A target-date portfolio is part of a series of funds offering multiple retirement dates to investors.
- **Target-Date 2040 (TJ).** Target-date portfolios provide diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2036-2040) for retirement. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Management adjusts the allocation among asset classes to moreconservative mixes as the target date approaches, following a preset glide path. A target-date portfolio is part of a series of funds offering multiple retirement dates to investors.
- **Target-Date 2045 (TK).** Target-date portfolios provide diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2041-2045) for retirement. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Management adjusts the allocation among asset classes to moreconservative mixes as the target date approaches, following a preset glide path. A target-date portfolio is part of a series of funds offering multiple retirement dates to investors.
- **Target-Date 2050 (TN).** Target-date portfolios provide diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2046-2050) for retirement. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Management adjusts the allocation among asset classes to moreconservative mixes as the target date approaches, following a preset glide path. A target-date portfolio is part of a series of funds offering multiple retirement dates to investors.
- **Target-Date 2055 (TL).** Target-date portfolios provide a diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2051-2055 and beyond) for retirement. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Management adjusts the allocation among asset classes to more-conservative mixes as the target date approaches, following a preset glide path. A targetdate portfolio is part of a series of funds offering multiple retirement dates to investors.
- **Target-Date 2060 (XQ).** Target-date portfolios provide a diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2056-2060) for retirement. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Management adjusts the allocation among asset classes to more-conservative mixes as the target date approaches, following a preset glide path. A target-date portfolio is part of a series of funds offering multiple retirement dates to investors.
- **Target-Date 2065 (TU).** Target-date portfolios provide a diversified exposure to stocks, bonds, and cash for those investors who have a specific date in mind (in this case, the years 2061-2065 and beyond) for retirement. These portfolios aim to provide investors with an optimal level of return and risk, based solely on the target date. Management adjusts the allocation among asset classes to more-conservative mixes as the target date approaches, following a preset glide path. A target-date portfolio is part of a series of funds offering multiple retirement dates to investors.

STATEMENT OF ADDITIONAL DISCLOSURES: RISKS

Investing involves risk. Loss of principal is possible. An investment in a fund is not a bank deposit, and it is not insured or guaranteed by the Federal Deposit Insurance Corporation (FDIC) or any other government agency. Each fund carries its own specific risks which depend on the types of investments in the fund. Investors should review the fund's prospectus carefully to understand the risks before investing.

In general, some of the risks associated with the Morningstar Categories shown in this report are as follows:

- **Allocation.** Different methods of asset allocation are associated with varying degrees of risks. Conservative portfolios contain low risk investments but may not earn any value over time. Moderate portfolios have a higher level of risk than conservative portfolios. Aggressive portfolios mainly consist of equities, so their value tends to fluctuate widely.
- **Bonds.** Bonds are subject to interest rate risk. As the prevailing level of bond interest rates rise, the value of bonds already held in a portfolio decline. Portfolios that hold bonds are subject to declines and increases in value due to general changes in interest rates. Bonds are also subject to prepayment risk, which is the chance that an issuer may exercise its right to prepay its security, if falling interest rates prompt the issuer to do so. Forced to reinvest the unanticipated proceeds at lower interest rates, the fund would experience a decline in income and lose the opportunity for additional price appreciation.
- **Emerging Markets.** Investments in emerging markets securities may be subject to greater market, credit, currency, liquidity, legal, political, and other risks compared with assets invested in developed foreign countries.
- **Foreign.** Investments in foreign securities may be more volatile than investing solely in U.S. markets due to interest-rate, currency, exchange rate, economic, and political risks. The value of these securities can change more rapidly and extremely than can the value of U.S. securities. Foreign securities are subject to increased issuer risk because foreign issuers may not experience the same degree of regulation as U.S. issuers do and are held to different reporting, accounting, and auditing standards. In addition, foreign securities are subject to increased costs because there are generally higher commission rates on transactions, transfer taxes, higher custodial costs, and the potential for foreign tax charges on dividend and interest payments. Many foreign markets are relatively small, and securities issued in less-developed countries face the risks of nationalization, expropriation or confiscatory taxation, and adverse changes in investment or exchange control regulations, including suspension of the ability to transfer currency from a country. Economic, political, social, or diplomatic developments can also negatively impact performance.
- **Foreign Currencies.** Foreign currencies are subject to the risks associated with such currencies and the changes in their values relative to the U.S. dollar. Such risks include volatility in the price relationship between the U.S. dollar and foreign currencies. The value of foreign currencies relative to the U.S. dollar can be affected by many factors, including national debt levels, trade deficits, international trade and foreign policies, changes in trade and balance of payments, governmental fiscal and monetary policies, currency exchange rates and changes in supply and demand that affect those rates, investment and trading activity of mutual funds, hedge funds and currency funds, exchange rate controls and government intervention in currency markets, inflation rates, interest and deposit rates, market expectations about future inflation rates and interest rates, and global and national economic, financial, political, regulatory, judicial, military and geographical events or developments. Prices of currencies of less developed or emerging market nations tend to be more volatile than those of developed countries, given the greater political, regulatory, economic, financial, military and social instability and uncertainty in less developed or emerging market nations.
- **Foreign Regions.** Investments in securities from a particular country or region may be subject to the risk of adverse social, political, regulatory, or economic events occurring in that country or region. Country- or region-specific risks also include the risk that adverse securities markets or exchange rates may impact the value of securities from those areas.
- **Large Cap Equities.** Concentrating assets in large-capitalization stocks may subject the portfolio to the risk that those stocks underperform other capitalizations or the market as a whole. Large-cap companies may be unable to respond as quickly as small- and mid-cap companies can to new competitive pressures and may lack the growth potential of those securities. Historically, large-cap companies do not recover as quickly as smaller companies do from market declines.

STATEMENT OF ADDITIONAL DISCLOSURES: RISKS

- **Money Market.** An investment in a money market mutual fund is not insured or guaranteed by the FDIC or any other government agency. Although the funds seek to preserve the value of your investment at $1.00 per share, it is possible to lose money by investing in a money market fund.
- **Sector.** Concentrating assets in a particular industry, sector of the economy, or markets may increase volatility because the investment will be more susceptible to the impact of factors such as the market, the economy, regulations, and other dynamics affecting that industry or sector compared with a more broadly diversified asset allocation.
- **Small/Mid Cap Equities.** Portfolios that invest in stocks of small- to mid-cap companies involve additional risks. Smaller companies typically have a higher risk of failure and are not as well established as larger blue-chip companies. Historically, smaller company stocks have experienced a greater degree of market volatility that the overall market average.
- **Target-Date Funds.** Target-date funds typically invest in other mutual funds and are designed for investors who are planning to retire during the target date year. The fund's target date is the approximate date of when investors expect to begin withdrawing their money. A target-date fund's investment objective/strategy typically becomes more conservative over time primarily by reducing its allocation to equity mutual funds and increasing its allocations in fixed-income mutual funds. An investor's principal value in a target-date fund is not guaranteed at any time, including at the fund's target date.
- **Taxable Bond.** Investments in taxable bonds such as government bonds, long-term and short-term bonds, bank loans, corporate bonds, preferred stock, high-yield bonds, etc. are subject to numerous risks including those relating to reinvestment, inflation, market, selection, timing, and duration.

12 Point Methodology

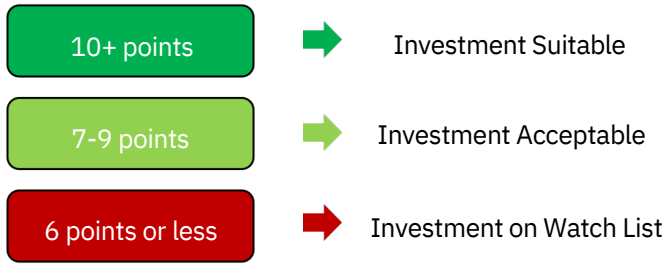

Overview of LPL 12 Point Methodology

LPL Financial Retirement Partners' proprietary scoring system is based on a review of 12 different factors. Each factor is assessed using a pass/fail system: a favorable characteristic receives a passing score of 1, while an unfavorable characteristic receives a failing score of zero. Scores are updated quarterly, using the last five years of data.

There are four areas that are scored

- Investment Style: 2 points
- Performance: 4 points
- Risk/Risk-adjusted Returns: 4 points
- Qualitative Factors: 2 points

The "Total Score" is the sum of the individual scores.
The individual component scores are equally weighted. The best possible score is 12 points. The 12 Point Score is designed to help review plan investments, it does not constitute a specific recommendation or advice and should not be the sole factor in selecting and monitoring investments.

Quantitative Factors (83%)	Style-related Return-based Risk-based
Qualitative Factors (17%)	Expense ratio Manager tenure

Member FINRA/SIPC

Quantitative Factors Explained

Factor/Weight	Definition	Pass-Fail Scoring
Style-related 17% of total	Factors measure how closely correlated the investment's returns are with its benchmark index.	**3-year R-squared:** 1 point if R-squared is at least 80%. Pass implies that investment's return moves in the direction of its index at least 80 % of the time.* **5-year R-squared**: 1 point if R-squared is at least 80%. Pass implies that investment's return moves in the direction of its index at least 80 % of the time.
Return-based 33% of total	Factors measure an investment's demonstrated ability to outperform relative to its peers, as well as its ability to capture more return in up markets than it does in down markets.	**1-, 3-, & 5-year return**: 1 point each if investment outperformed peer-group median. Pass implies that the investment has outperformed more than half of its category peers. **5-year up/down capture**: 1 point if up capture > down capture. Pass implies investment captures more when market is up than when it is down.
Risk-based 33% of total	Factors quantify the amount of return an investment generated relative to an index, and the amount of risk it took to generate that return.	**3-& 5-year information ratio**: 1 point each if the ratio > 0. Pass implies that investment outperformed its benchmark index. **3-& 5-year beta**: 1 point each if beta is between 0.75 and 1.15. Pass implies manager is taking risk within 75% and 115% of benchmark index. ***5-year Sharpe ratio**: target date scoring uses 5-year Sharpe ratio in place of 3-year R-squared. 1 Point if the ratio is > category average.

Qualitative Factors Explained

Factor/Weight	Definition	Pass-Fail Scoring
Expense Ratio 8.5% of total	The expense ratio measures the cost of the investment. Total fees reduce the return captured by the investor.	**Net expense ratio:** 1 point if the ratio is ≤ category average. Pass implies that the investment charges no more than the average of all others in that category.
Manager Tenure 8.5% of total	Manager tenure is important when reviewing track record. You want to know that the track record being reviewed is one from the current management team.	**Longest tenured manager:** 1 point if the tenure of longest tenured manager is > 5 years, OR > category average (whichever is shorter). Pass implies that manager has been in place for relatively long time.

Glossary of Selected Statistics

Beta – A measure of volatility, or systematic risk, of a security or a portfolio comparison to the market as a whole. A Beta of 1.00 means that a portfolio's risk is at parity with the market benchmark associated with that portfolio. A Beta less than 1.00 means that a portfolio is less volatile than the market, a Beta over 1.00 means a portfolio is more volatile/risky than the market. A Beta range of 0.75 –1.15 will earn a point within the scoring system.

Information ratio ("IR") – A measure of risk-adjusted return that is more commonly used by institutional clients than Sharpe ratio. The higher the IR, the better the investment's risk-adjusted return. IR is defined as the annualized excess return divided by the tracking error. Investments with a positive IR receive a favorable score on the scorecard.

R-squared – A statistic that measures how well the investment tracks the benchmark index. For example, an R-squared statistic of 90% indicates that 90% of the movement in the investment can be explained by the movement in the underlying benchmark index. The scorecard compares the investment's R-squared to 80%.

SharpeRatio–(factorusedinTargetDateFundsscoreonly)–Ameasureofrisk-adjustedreturn. SharpeRatiousesStandardDeviationastheriskstatistic.
Measured using monthly data over a five-year span. The scorecard provides a favorable score if the Sharpe Ratio is greater than the category average.

Standard deviation - A measure of the dispersion of a set of performance data from its mean. The greater the range of returns, the higher the standard deviation. Standard deviation is calculated to measure the volatility of a fund's returns which is an indicator of a fund's performance consistency and is also used as a measurement of a portfolio's risk.

Tracking Error – Tracking error measures the consistency of excess returns, or the difference between the returns of the investment and the target index. The lower the tracking error, the closer the investment follows the index.

Up capture, down capture – Up capture reflects how the investment has historically performed relative to the benchmark index in an up market. For example, an investment with an up capture of 110 has returned 110% of the benchmark index return in up market cycles. Similarly, down capture measures the investments historical relative performance in down markets. The scorecard measures up capture relative to down capture, giving a favorable score if up capture is greater than down capture.
